TWO POST LIFT SERIES

QL9KBP
TWO POST BASEPLATE LIFT

PRODUCT DESCRIPTION

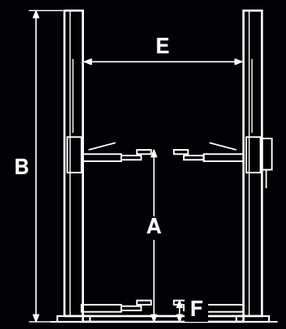

- The 9,000 lb baseplate design fits garages with lower ceilings and eliminates the overhead beam. It accommodates compatible cars, trucks, and SUVs while preserving room above the lift.
- Four symmetrical, three-stage arms extend to reach manufacturer-recommended lifting points. Automatic arm restraints secure the arms during lifting. Tool trays keep small items within reach.
- Dual hydraulic cylinders use a chain-and-pulley drive. Equalizer cables, UHMW polyethylene sliders, and bronze bushings support smooth, synchronized carriage travel.
- A single-point release operates both column safety locks. The floor cover protects the crossover components between the columns. Door guards and toe guards help protect the vehicle and operator.
- The power unit runs on 110V, single-phase power and comes prewired with a grounded three-prong plug. The finish is gray-and-black powder coat.
- Includes adjustable screw pads and 3 in. extension adapters for different lifting-point heights. Adjust all four pads for secure contact before raising the vehicle.

QL9KBP
TWO POST BASEPLATE LIFT

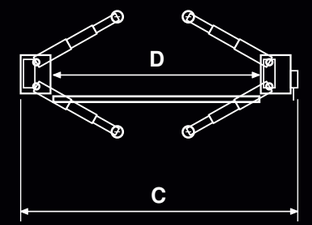

Technical parameters	
Model	QL9KBP
Lifting capacity	9,000 lb
Max. lifting height A	76.5-78.25 in.*
Max. lift with extensions	79.5-81.25 in.*
Overall height B	112 in.
Overall width C	136.25 in.
Drive-through clearance D	100.75 in.
Between columns E	112.25 in.
Minimum pad height F	3.5 in.*
Gross weight	1,581 lb
Motor / power	110V, single-phase
Lifting time	49 seconds
Power connection	Prewired three-prong plug
